

## Custom

Today's technologies in coated fabric and computer-aided engineering allow designers and architects to expand their creative talent, right to the edge of their imagination. We have learnt to translate "imagination" into boundaries, curves and loads that will allow our engineers to produce reliable membranes of virtually any shape.

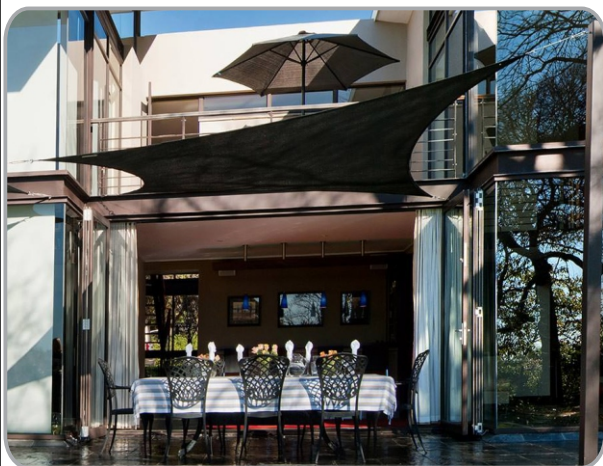

We will assist you at every point in the design of the structure. We offer the services of talented individuals and draw on our 27 years of experience in developing customised tensile structures. We supply solutions to your engineering needs and bring you the latest innovation in fabric application (e.g. form finding software, new designs, new fabrics and materials). It is our vision at Prima Shade Sail & Fabric Structure to listen to our clients, understand their individual needs and turn them into organic designs.

## Custom Designs

In Demand Trading over the past 27 years has developed a great deal of expertise in the design, manufacture and installation of custom tensile wind rated structures.

Our in-house engineers have a wealth of experience in the design and development of custom designs for extreme high wind areas as well as the South African Standards. We use only the highest imported quality fabrics and stainless steel fixtures.
